

Qommentary October 2020

Release Notes

Bug fixes

QOMMENTARY INSIGHTS

[QOM-427] Render in Storytelling presentation

Fixed an issue which caused extension to render incorrect commentary when embedded in a Storytelling presentation.

QOMMENTARY INSIGHTS

[QOM-548] Allow global commentary

Fixed an issue which prohibited commentary to be created when "Enable global commentary" option was enabled.

QOMMENTARY TABLE

[QOM-375] Rendering in full screen view

Fixed an issue which caused extension to display a blank screen when being rendered in full screen view.

QOMMENTARY TABLE

[QOM-393] Loading comments on conditionally shown columns with selections applied

Comments were not being retrieved correctly when columns were conditionally shown/hidden if selections were applied.

QOMMENTARY TABLE

[QOM-545] Render in Storytelling presentation

Fixed an issue which caused extension to render blank when embedded in a Storytelling presentation.

New Features

QOMMENTARY INSIGHTS

Support for alternate states

Qommentary Insights is now fully compatible with Qlik Sense alternate states, allowing commentaries to be written across multiple application contexts.

COMMENTARY INSIGHTS

Support for section access

Section Access allows datasets to be reduced based on user row-level access. This powerful feature introduces commentary governance integrated with Section Access. Choose which reduction fields the extension should use and restrict commentary context based on user access.

COMMENTARY INSIGHTS

Comments included in email template when mentioning users

Mentioning users in comments is a great way to loop people into conversations. When users are mentioned in comments, email templates now have a new [Comment] tag which would embed the original comment where the user was mentioned, thus bringing more context to your messages.

This tag is only supported in "Commentary Comment Added" and "Commentary Mention" templates.

COMMENTARY INSIGHTS

Visibility control for Commentary Explorer

A new property option is available under *Commentary > General* to control visibility of Commentary Explorer search feature.

COMMENTARY TABLE

Support for alternate states

Commentary Table is now fully compatible with Qlik Sense alternate states, allowing row-level comments to be written across multiple application contexts.

COMMENTARY TABLE

Comments included in email template when mentioning users

Mentioning users in row comments is a great way to loop people into conversations. When users are mentioned in comments, email templates now have a new [Comment] tag which would embed the original comment where the user was mentioned, thus bringing more context to your messages.

This tag is only supported in "Commentary Comment Added" and "Commentary Mention" templates.
